1 Explanation of Symbols and Safety Instructions

This SKI has safety information and instructions to help you eliminate or reduce the risk of accidents and injuries.

1.1 Recognize Safety Information

 **This is the safety alert symbol.** It is used to alert you to potential physical injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

1.2 Understand Signal Words

A signal word will identify safety messages and property damage messages, and it will indicate the degree or level of hazard seriousness.

 WARNING

This indicates a hazardous situation that, if **not** avoided, could result in death or serious injury.

2 Operation Specifications

- 0.50 or 0.75 in. (130 or 190 mm) pipe thread connection for a tank outlet
- 75 or 150 psi pressure
- 210° F (99° C)

 In RVs, a p/t relief valve that weeps during the heating cycle may signal it is necessary to restore the internal air pocket within the Dometic water heater. To re-establish this air pocket, refer to your owner's manual.
