

REFRIGERATOR SURGE PROTECTOR

REFRIGERATOR
BULLETIN R75/6B
JULY 1996

The Dometic Corporation is making available a new electronic in-line circuit surge protector designed exclusively for Dometic refrigerators. This special appliance adaptor is very similar to the circuit surge protectors commercially available for computers.

The Surge Protector has the following features:

- Easy installation – quickly plugs in series with existing module board
- Filters out voltage spikes.
- Two 20-second delays in restarting LP gas ignition resulting from a brief interruption of DC power.
- Two additional LP gas ignition attempts – resulting from flame blow out, flame disturbance or low LP gas pressure conditions before the LP gas safety lock-up is completed.
- Includes a wire harness kit

NOTE: This protective device has already been designed into our current models and can be identified by looking at the power module. Refrigerators with power modules having **PURPLE** connectors **DO NOT need the surge protector.**

The **3108703.574** Surge Protector fits the following models:

RM2607	RM2811	RM3663	RM3863
RM2611	RM3607	RM3807	RM4872
RM2807	RM3662	RM3862	RM4873

The **3108703.582** Surge Protector fits the following models:

RM7030	RM7732
RM7130	RM7832
