HEATING CABLE (DM2652 & DM2852)

During the summer months of high temperatures and humidity, the metal frame between the freezer and fresh food compartments may have water droplets forming. This refrigerator comes standard with a 12V DC heating cable that will evaporate the water droplets when they form.

To have the heating cable on, you position the switch located beneath the control panel to **I**. The heating cable can be left on continuously or only used when temperatures require it.
