**AWNING WARRANTY
BULLETIN AE4/8B
SEPTEMBER 1998**

WARRANTY BULLETIN

We at The Dometic Corporation are pleased to announce the addition of a new patented process on our awning production lines. We are now adding spring tension to our awning torsion assemblies with automated torsion tensioning machines that assure the proper amount of tension to each torsion for each size of awning.

This will nearly eliminate the number of “tension adjustment” warranty service calls, under the defect code of 103.01, that result from improper tension or over winding.

All torsion replacements and non-warranty tension adjustments should still follow the instructions for torsion replacement packaged with the torsion. These instructions require the complete removal of tension from the torsion and the re-tensioning with the correct number of turns for the length of awning being serviced. For your convenience, attached are the torsion charts for A&E Awnings.

REVISION

Form No. 3107941.019 9/98

⚠ WARNING

Use extreme care. Springs under tension are dangerous. If not controlled they will unwind quickly. Keep hands and clothing clear of top casting, as personal injury may result.

⚠ WARNING

This manual must be read and understood before installation, adjustment, service, or maintenance is performed by a qualified service technician. Modification of this product can be extremely hazardous and could result in personal injury or property damage.
