Injector

Injector	Injector size
	203P1 - M5 X 0.5P Jet 73H, SKU: 4463000529 103F, 203F2, 303F (large) - HM5T 0.75-0.73-2 SKU: 4463000573 303F (small) - HM5T 0.75-0.51 SKU: 4463000495

Maintenance

- This appliance is fitted with a specific size injector to regulate the correct amount of gas.
- Should the hole in the injector become blocked, this may result in a small flame or no flame at all. Do not attempt to clean the injector with a pin or other such device as this may damage the orifice, which could make the appliance unsafe.

Replacing a Blocked Injector (203P1):

- Your appliance is fitted with a specific size jet to regulate the correct amount of gas.
- Should the hole in the jet become blocked, this may result in a small flame or no flame at all. Do not attempt to clean the jet with a pin or other such device as this may damage the orifice, which could make the appliance unsafe.

i) To replace the jet: Remove any cooking surfaces, close the lid and turn the appliance upside down.

ii) Gently unscrew the bottom panel by removing the screws.

iii) Unscrew the screw for the affected burner(s), carefully loosen and drop the burner as illustrated, to expose the injector.

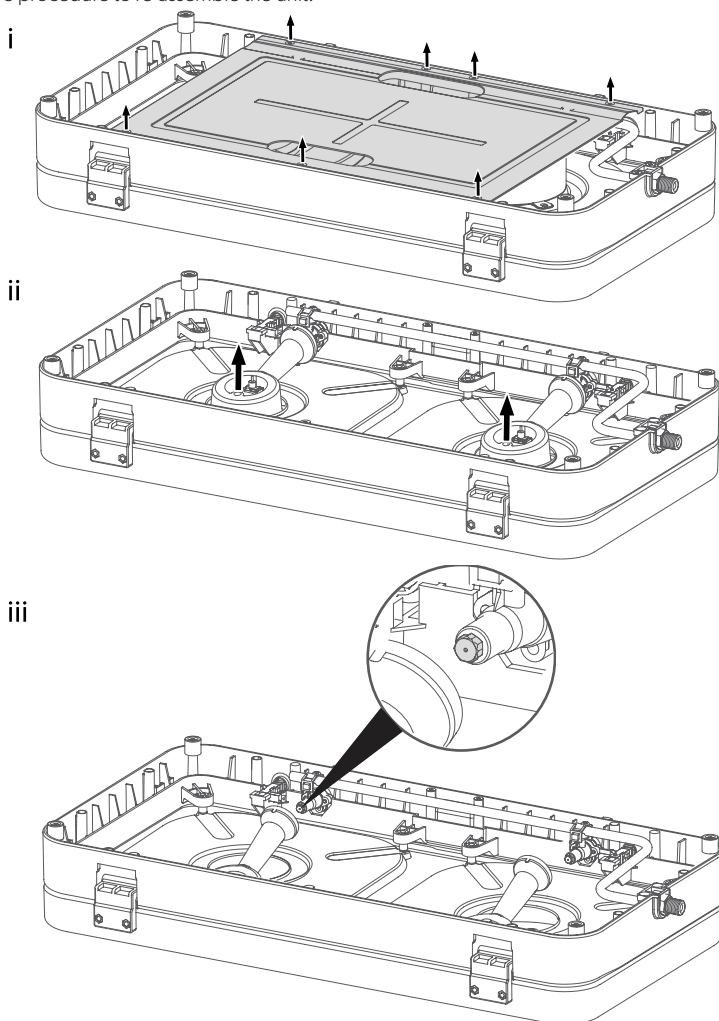

Note: the burner is connected to the piezo cable, after replacing the injector and reassembling the appliance, check that this cable is still connected.

iv) The injector can now be seen on the valve.

Remove the injector using a suitable spanner. Do not use pliers on the injector as this may damage the injector, making it unusable or impossible to remove.

Screw the new injector into the valve. Do not over-tighten as this may damage the injector.

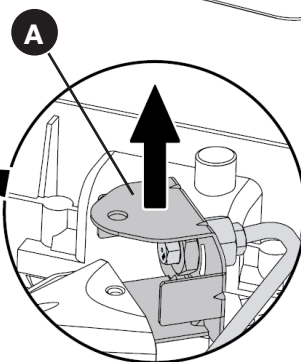

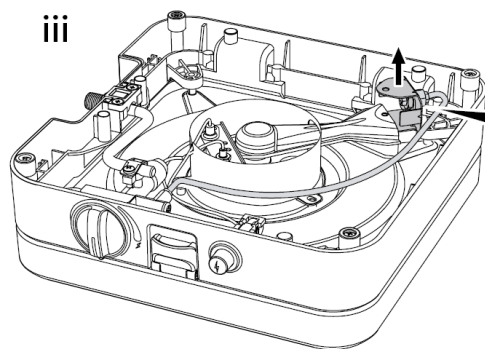

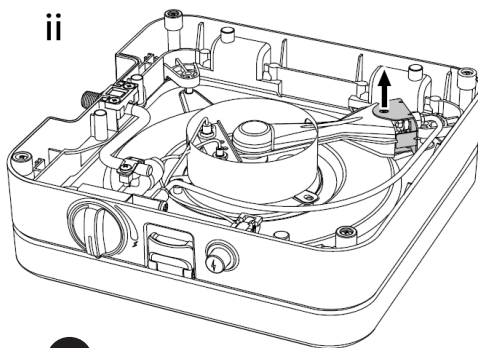

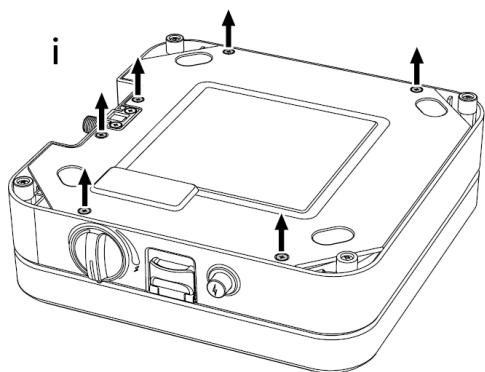

Reverse the above procedure to re-assemble the unit.

Replacing a Blocked Injector (103F, 203F2, 303F):

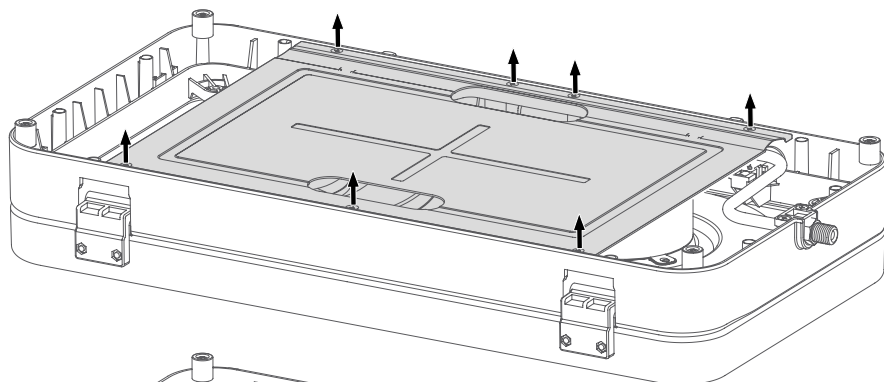

- To replace the injector: Remove any cooking surfaces, close the lid and turn the appliance upside down.
- i) Gently unscrew the bottom panel by removing the screws and removing the base plate.
 - ii) Unscrew the screw for the affected burner(s).
 - iii) To access the injector, lift up the airvent cover (A) as indicated.
 - iv) Carefully loosen the hex nut (B) and remove the airvent cover to expose and access the injector (C).
 - vi) Remove the injector using a suitable spanner. Do not use pliers on the injector as this may damage the injector, making it unusable or impossible to remove.
 - vii) Screw the new injector into the valve. Do not over-tighten as this may damage the injector.

Reverse the above steps to reassemble the appliance.

Removing the hose

- This appliance is fitted with a LCC27 Hose and regulator. This hose and regulator may be removed in order to fit a compliant RV hose with Type 1 Bayonet (not included).

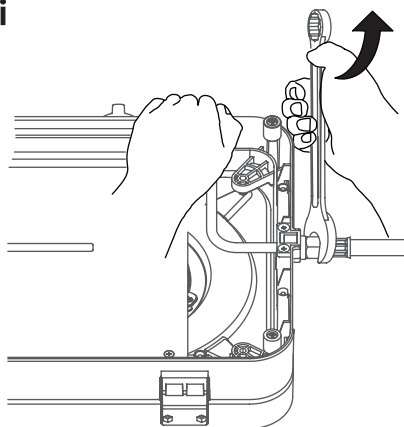

Exchanging the LCC27 hose and regulator for a RV hose

Note: The LCC27 gas hose is adhered to the harness (gas manifold) of the appliance by a glue bond. To avoid damage to the harness, care must be exercised when removing the LCC27 Hose and regulator. The appliance heatshield may need to be removed if the harness is not accessible.

- Using a suitable spanner, loosen the hose from the appliance. Ensure stability of the harness (so that the gas manifold does not rotate) by holding it in place with your free hand.
- Remove any adhesive residue from the threading of the harness by using a pin or a small screwdriver. Take care not to damage the thread.
- Attach a compliant RV hose, ensuring that the RV hose is aligned and fitted correctly. Use a suitable spanner (or handwheel if available) to tighten the connection, and perform a leak test on all joints before using the appliance.
