

Important Toilet Tissue Notice for marine and RV toilet systems

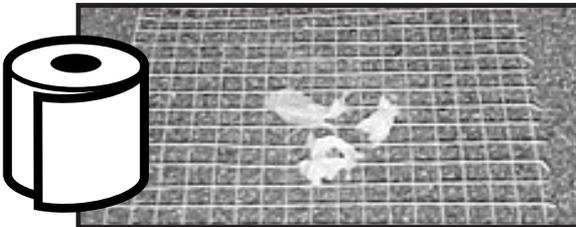

Do not use ultra-thick or ultra-soft residential toilet tissue with VacuFlush® and SeaLand® toilet systems

While softer, thicker toilet tissues may be acceptable for standard residential toilet use, tests have found that some of these tissue paper products may not dissolve well, making it difficult for low water consumption toilets to move the tissue through a standard sewage system.

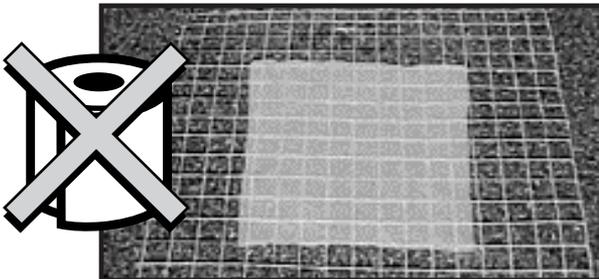

Because SeaLand toilet systems use very small amounts of water, some ultra-thick or ultra-soft residential tissue papers have shown a tendency to accumulate in a VacuFlush vacuum tank or waste holding tank. As tissue accumulates, incoming flush water is unable to move the undissolved paper through the tank. Build-up of this tissue in a vacuum tank or holding tank will eventually make the toilet system inoperable. Consequently, such **residential toilet tissue is not recommended for use in any Dometic toilet system (with VacuFlush or SeaLand toilets).**

Avoid toilet system clogs – use RAPID-DISSOLVING toilet tissue

To avoid potential clogging problems with some household tissues, Dometic recommends the use of quick-dissolving tissue, such as SeaLand® Rapid-dissolving 1-ply or 2-ply Toilet Tissue. To determine any tissue's ability to dissolve, immerse one square of tissue in a jar of water and shake 5 times. The tissue sample should disintegrate so that it is no longer in one piece. See images below.

Test 1 – SeaLand rapid-dissolving toilet tissue

Test 2 – Famous household brand ultra-soft toilet tissue

Call Dometic Sanitation Customer Service Department at 1-800-321-9886, 8 a.m. to 5 p.m. ET if you have questions or need additional information.
